BUG BUSTERS

Introducing our new Essential Oil Blend

We blended together 20 different essential oils with strong anti-viral and anti-bacterial properties. The plan was to make disinfectant soaps and sprays strong enough to fight all types of viruses and bacteria. Knowing that infection occurs from direct contact through broken skin or mucous membranes with the blood, or other bodily fluids and secretions I wanted a product we could use to sanitize hands in all situations. When it comes to contamination our hands can be our worst enemy. Keeping them clean with disinfectant keeps us safe.

This is what the World Health Organisation says about hand sanitation in infected areas:

Either an alcohol-based hand rub or soap and running water can be used for hand hygiene, applying the correct technique recommended by WHO. It is important to always perform hand hygiene with soap and running water when hands are visibly soiled. Alcohol-based hand rubs should be made available at every point of care.

**These are the 20 essential oils used to make our Bug Buster blend:
Basil, Bergamot, Cassia, Cinnamon, Clary Sage, Clove Bud,
Eucalyptus, Juniper Berry, Lavender, Lemon, Lemongrass, Lime,
Melissa, Neem, Niaouli, Peppermint, Rosemary, Spearmint, Tea Tree
and Thyme**

We used equal amounts of each essential oil to make our blend. Should you prefer to blend your own Bug Buster Essential Oil Blend we have stock of all of the above oils (and many more) bottled individually.

Cup of Coffee and a Chat with Jackie...

HeIIIIIIloooo!

Yeah, another late Good-Newsletter from me! I had so much to research and so many products to source for this newsletter that the time just went by...

Well, I guess some of you must think I am hysterical and paranoid about Ebola, and maybe you are right. I hope you are right! I hope it never reaches our shores, I hope we never have to worry whether the person who sweated on us in a hot summer taxi was infected, I hope we never have to worry whether the customer who coughed in our face was infected, I hope we never have to worry about who our children play with in the playground... I hope we never have to worry about any of those things or the millions of other things we'll panic about if the dreaded virus does reach our shores. We all know how AIDs devastated Southern Africa. We also know Aids is easier to avoid than Ebola. With a huge percentage of our adult population already HIV positive I hate to think what Ebola could do to our country, our population and our economy. So yes, I am hysterical and paranoid but probably not without cause.

I have done my research and everything tells me our hands are our biggest danger when it comes to infection. None of us realise how many times a day our hands go to our mouths, our noses and our eyes. Sneezing, itchy eyes, eating food, coughing and all those things bring our hands to infection entry sites. So, let's keep our hands clean, hygenic and sanitized. We can do this naturally with essential oils, all of those in my blend have very strong anti-viral properties. Between the soap, alcohol and essential oil blend viruses and bacteria will be prevented from reaching our mouths, noses and eyes via our hands

So, keep your hands clean and stay healthy.

Lots of love from Jackie and Mr Chomsky
